

ST-2200

SATURN
Strapping Systems

The **Saturn ST-2200** is the most advanced tabletop strapping system available. The electronic strap tension control delivers precise strap pressure from as little as 5 pounds up to as much as 120 pounds. Dial in the strap length and tension and you're ready to go. Loop the strap around the package and insert it into the machine. The strap is automatically tensioned, cut and heat sealed. Another length of strap automatically feeds out for the next product to be strapped.

- Easy-to-use controls include illuminated on/off switch, reset, strap reverse, strap feed, strap length, and precision electronic dial for strap tension adjustment.
- Engineered for flexibility, allowing you to use any polypropylene strap from 1/4" to 5/8" wide. Adjustable table height from 29" to 31". Locking casters for portability to move anywhere.
- Superior design with fewer moving parts provides years of low maintenance costs.
