

HIGHLIGHT'S DEDICATED BUNDLER IS THE FOUNDATION OF YOUR STRETCH WRAPPING SYSTEM

You can build an economical stretch bundling system to adapt specifically to your packaging requirements. Whether protective packaging, internal packaging, or product unitization the Dedicated Bundler, in one machine provides the versatility needed for these different applications.

Stretch Set (patent pending), Highlight's film saving system is a standard feature on the Dedicated Bundler. Stretch Set allows you to precisely control film stretch will providing uniform, repeatable wrapping results. Results that mean increased product strength and lower packaging costs.

Stretch bundling for appearance and protection.

Bundle several boxes into one package saves on shipping costs. Stretch film's elasticity allows the combination of various box dimensions.

Stretch bundling individual boxes for master package.

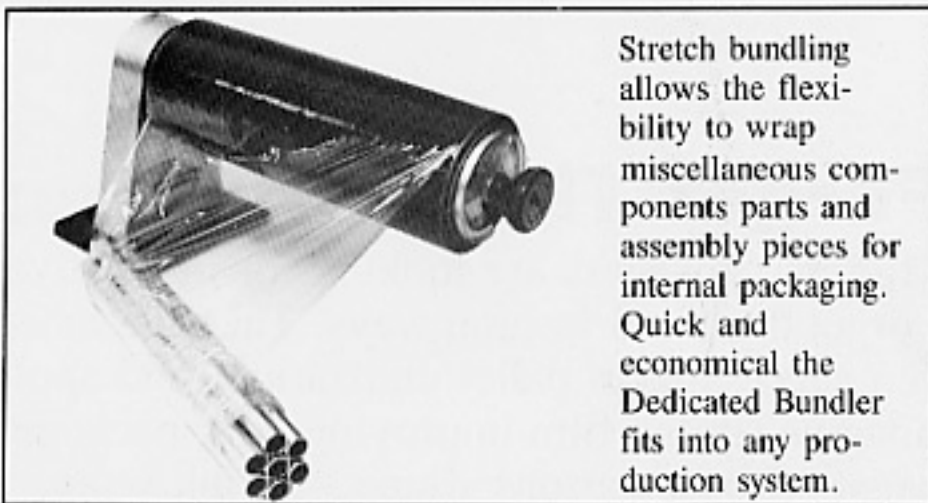

Stretch film's elasticity and excellent sealing properties make it a natural for stretch bundling. Stretch film's clarity allows for fast product identification as well as environmental protection.

Stretch bundling products on rolls or spools.

Rolls, spools or cylindrical products are easily unitized with stretch film with the Dedicated Bundler. While unitizing the product you also seal and protect against environmental elements.

Stretch bundling for internal packaging/material handling.

Stretch bundling allows the flexibility to wrap miscellaneous components parts and assembly pieces for internal packaging. Quick and economical the Dedicated Bundler fits into any production system.
