

The ELIMINATOR™ named for what it does best...

The inherent advantages of stretch film come together with the Highlight Eliminator™ to provide a truly innovative unifying system.

ELIMINATES Costs

Eliminates the cost and additional inventory of master cartons, strapping, shrink, and costly motorized systems. That's how it's earned its name—Eliminator.

ELIMINATES Obsolescence

That's true of all noteworthy tools that stand the test of time. Obsolescence is eliminated as your packaging requirements change. The Eliminator is there to meet those changing needs.

Engineered for packaging flexibility. Practical and easy to operate, the standard design of the Highlight Eliminator stretch bundles packages up to 24 x 24 x 24 inches and weighing up to 70 pounds.

Highlight designed the Eliminator to grow with your changing packaging requirements. Variations developed for your specific applications, such as increased package capacity, cylindrical or odd-shaped products, are easily incorporated.

Stretch Set™, for full range film stretch

Traversing handle with Dedicated Bundler accommodates all standard handwrap and machine roll sizes

A Constant Highlight Feature—Versatility

Versatility is achieved with the selective film placement capabilities of the traversing handle. The traversing handle spiral wraps a range of 30 inches. Reinforcing and center wraps need only be applied where you want them.

Adjustable zinc-plated support forks place your product at the center of the orbital rotation for product balance and handling ease.

Use Limited Only by Imagination

Internal packaging, combining multiple packages for shipment and environmental packaging are a few of the many ways you will use the Eliminator.

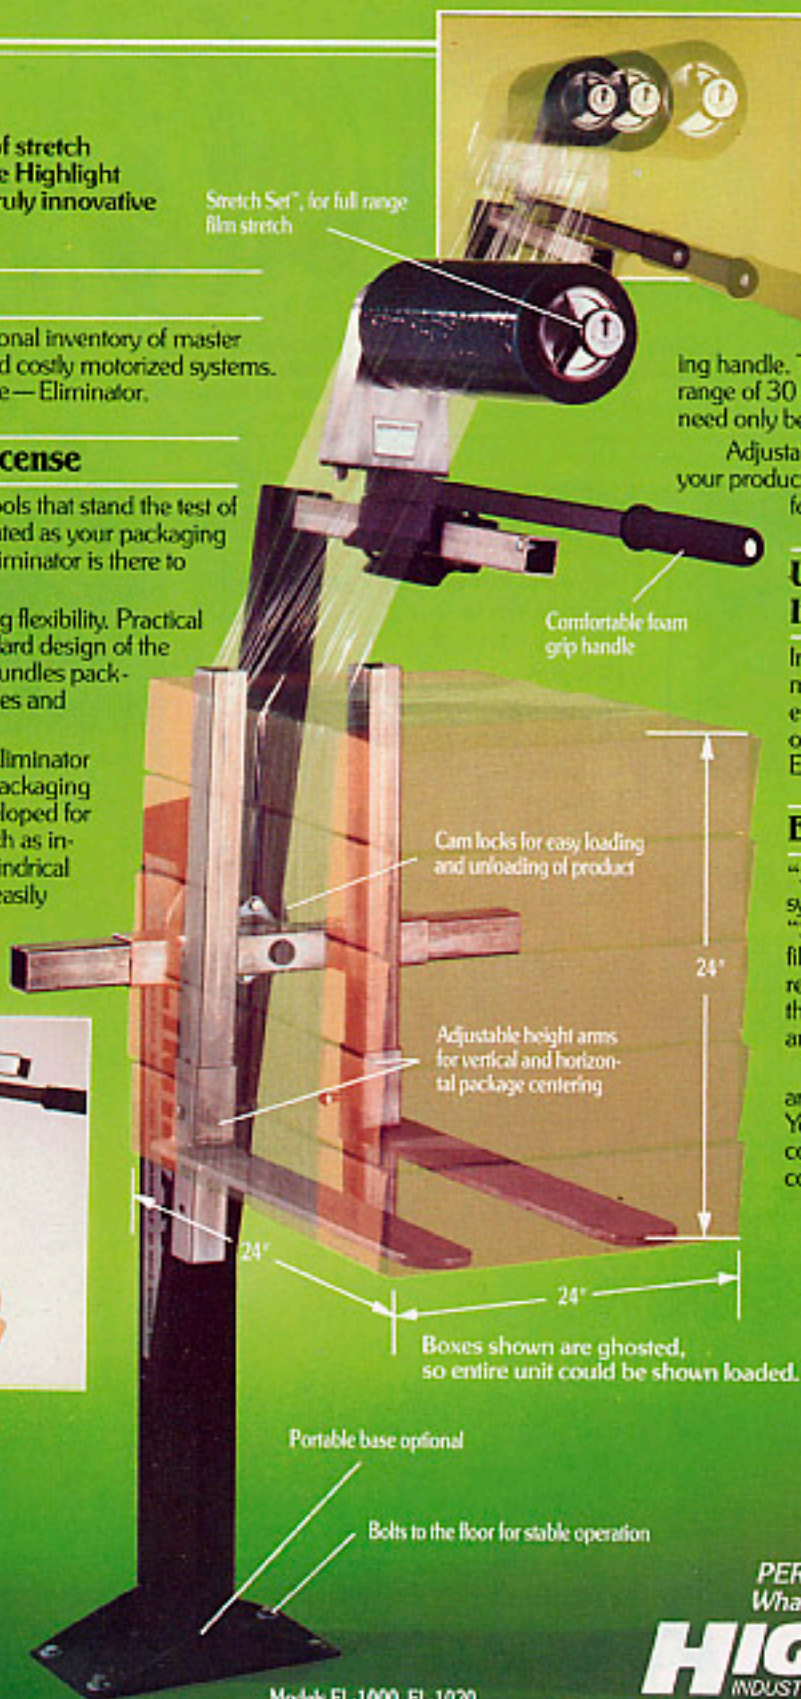

ELIMINATOR Exclusives

"Stretch Set"™, Highlights film saving system is a Highlight standard. "Stretch Set" allows you to control film stretch while providing uniform, repeatable wrapping results. Results that mean increased package strength and lower costs.

The Eliminator accepts all standard handwrap and machine films. Your film choices are not limited to costly re-rolled films on non-standard core sizes.

Many options are available such as the custom cradle for bundling cylindrical products (as shown)

Portable base optional

Bolts to the floor for stable operation

Models EL-1000, EL-1020
